WEATHER SYNOPSIS BY REGION

NORTHERN CALIFORNIA

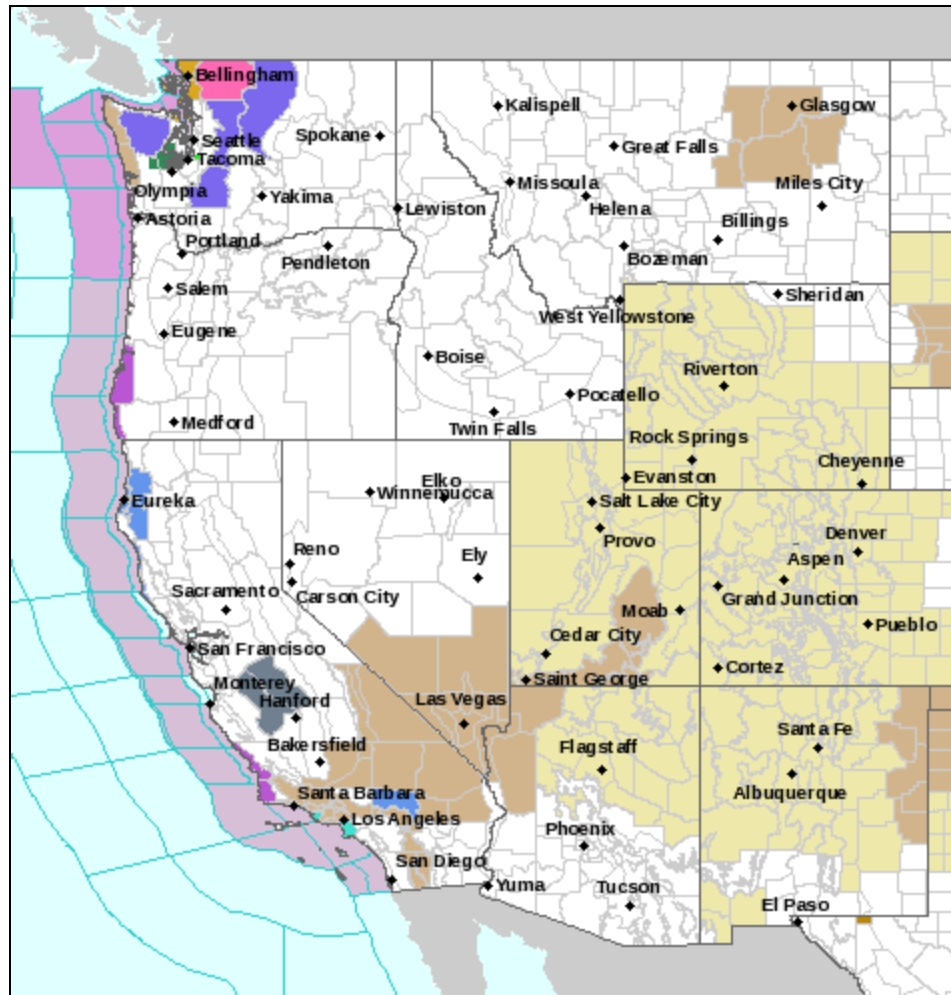

A progressive series of Pacific storm systems will briefly impact the region during the next 7 days. Drier and warmer weather due to ridging will occur in between the systems. Expect lingering precipitation this morning as the first Pacific wave exits the area. Light precipitation favoring the North Coast and Mid Coast areas will occur Tuesday afternoon and evening due to a fast moving, weak Pacific trough. A more potent, area wide precipitation event is expected during the weekend from a stronger Pacific low. Thanks to the progressive weather pattern, wind speeds and directions will also be changeable during the week. An overall lighter wind flow will occur today and Tuesday. Expect strengthening N to NE winds Tuesday night into Wednesday. A return to lighter winds Wednesday night through Friday before a strengthening southerly wind flow on Saturday. A more potent N to NE downslope wind event will be possible Sunday and Monday if the weather models hold to their current projections.

SOUTHERN CALIFORNIA

A quick moving Pacific trough will bring scattered showers away from the deserts this morning, with most locations expected to receive less than a tenth of an inch of additional rainfall. However, the Central Sierra will receive an additional quarter to half inch of rainfall. The snow level over the Sierra will be between 6,000 and 7,000 feet. This trough will also bring westerly winds of 20 to 40 mph with gusts to 60 mph to the wind prone mountain and desert areas through this afternoon. Maximum temperatures will be around 5 degrees below normal today, with 40s to low 50s across the mountains and 60s to low 70s in the valleys. A weak ridge of high pressure will build into California from the Pacific Ocean causing temperatures to warm to a little above average Tuesday through Thursday. Northeast to east winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of the region this evening through Tuesday morning and again Wednesday afternoon through Thursday morning. Minimum humidity will drop into the teens across the region Tuesday through Thursday, but minimum humidity will stay mainly above 20% across Central California. A Pacific trough will drop down the West Coast bringing significant cooling Friday through this weekend. Temperatures will become well below normal by this weekend. This trough will also bring showers to the entire region this weekend, with moderate rainfall totals expected.
